Ikelite's TTL housing for the Nikon D750 DSLR

Ikelite proudly announces the latest addition to its DSLR Housing line, which is designed to offer one of the best performance to dollar purchases in the world. The Ikelite DSLR housing is a seamless blend of functionality, lighting integration, durability and waterproof integrity.

TTL or "Through-The-Lens" flash metering means the camera controls flash duration to properly expose an image. Built-in proprietary circuitry tells the camera that a TTL external flash is attached, allowing the camera to adjust exposure more accurately than with slave TTL strobes.

An Ikelite exclusive: exposure adjustments directly through the back of the housing put the perfect shot within reach every time. Tweak your TTL exposure or take total manual control without taking your hand off your housing. A dial control on the

back of the housing acts as a remote control for compatible Ikelite DS-series strobes. Access plus/minus exposure compensation in TTL mode, plus manual power settings in half-stop increments.

This housing includes a balanced aluminum tray with our signature quick release handles for easy attachment and removal of external lighting. An aluminum 1/4-20 threaded top mount provides an additional attachment point for lightweight accessories.

Subal housing for the Panasonic GH4

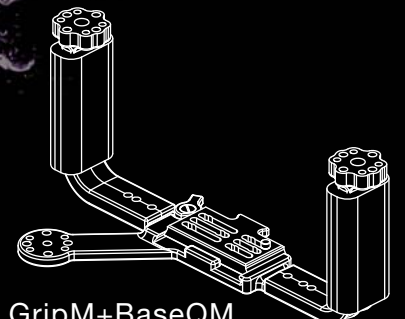

SUBAL is proud to present the first rendering images of the New SUBAL GH4 housing to be released. Austrian world's most renowned uw housing manufacturer is applying the last finishing touches to the most ergonomic housing on the market for the Panasonic Lumix GH4 camera.

The meticulously crafted GH4 housing expands the possibilities for professional photographers who demand the best performance and reliability in the most challenging environments.

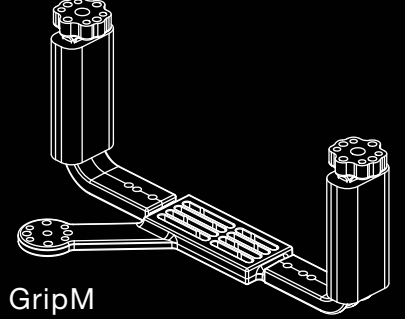

With its already known design, quality construction and ergonomic handling the SUBAL GH4 adds another housing to his line. Crafted from a solid block of high-grade seawater-resistant aluminum, which is anodized and put through a chemical hardening process.

蓝天海

Keldan Video 8X 10,000 lumen light

Ten thousand lumens in a light is an impressive feat... especially when you pack it in a travel friendly underwater video light that is available for purchase now. It's especially impressive when that much lighting power comes in a rugged yet precise Swiss-made package that is ready to dive as deep as 200 meters.

Where other light manufacturers might use an LED (or 2) that claims it can achieve this kind of output, KELDAN delivers it; actual measured output at operating temperatures in real world conditions. This kind of obsession with accuracy is part of the reason that KELDAN lights are known as the best underwater video lights available.

Today KELDAN is proud to announce a new underwater video

light that combines high output with the ruggedness and precision that KELDAN is known for... the KELDAN Video 8X. At 10,000 actual lumens output, this is the brightest KELDAN to date. The Video 8X combines the new reflector and dome lens configuration from the popular Video 4X with a higher output led drive circuit and larger battery, resulting in a super wide 10K lumen light that packs easily for travel.

The Video 8X takes advantage of the fixed light head style (as compared to the modular Video 8M) to shunt heat effectively, allowing for the high output.

Subal ND750 for Nikon D750

SUBAL announces the release of the SUBAL ND750 professional underwater housing for Nikon D750 D-SLR camera.

Designed for the world's most demanding photographers and multimedia professionals, especially those in the fields of underwater sports and nature photography as well as advanced amateur photographers.

With SUBAL's more than 40 years of expertise in housing design and manufacture, high-quality craftsmanship and ergonomic design are integral features of the new ND750. The handling and feel of SUBAL housings are unmistakable, matched only by their peerless reliability and dependability.

The ND750 housing will be available in January 2015 at an MSRP of USD 3,800 (port not included)

Ikelite TTL housing for Panasonic Lumix LX100

This sophisticated installation supports all important camera functions including all three custom function buttons and front aperture dial. Rear controls are marked with laser engraved indicia which will never wear off or fade away.

The tray and handle shown are included with the base housing, providing comfortable handling and an attachment point for external lighting.

The housing port is designed to accept color filters, wide angle, and macro options for 3.9-inch diameter ports.

This housing is compatible with the WD-4 Wide Angle Dome for underwater wide angle which is sharper edge to edge than any external wet lens.

KNOWLEDGE

Acquapazza APSO-A72 Sony A7 housing

Japanese housing Acquapazza have moved forward on their development of a Sony A7 11 (ILCE-7M2) housing.

Once the Sony's lens road map had been announced, Acquapazza investigated the 28mm plus fisheye conversion lens and the 90mm Macro which will be available in 2015. A year ago since there were no such E mount lenses Acquapazza designed the housing to take A mount lenses but these were large and resulted in a large housing for a small camera.

As a result they have now developed their APSO-A72 housing to take just E mount lenses so it is both small and lightweight. The housing will take the following lenses: 28mm+fisheye, 90mm Macro, 16-35mm wide zoom and 28-70mm standard zoom. Close up lenses can be accommodated.

There are 3 x M14 screw thread sockets, 2 for strobes and one for an external monitor.

A housing will be available for the Sony HVL-F20AM strobe which will provide optically triggered TTL photography.

As with many other Acquapazza housings there are two versions of the

rear housing – the slant allows the LCD screen to be tilted or the flat can incorporate INON's 45° viewfinder as an option. There will also be an optional hand grip available.

Acquapazza will continue to produce the APSO-A7 and the APSO-A72 will be available as soon as possible.

Nauticam NA-D750 housing for the Nikon D750

NA-D750 is the 15th unique Nikon DSLR design from Nauticam, and evolutionary improvements inherited from this extensive heritage combined with new refinements result in the most rewarding user experience possible.

The operation of the housing in water is intuitive, comfortable, and ergonomic. Key controls are placed within easy reach of the housing handles, exactly where the underwater photographer needs them. All controls are clearly labeled, and several button and lever formats are used to allow operation by feel.

Core camera functions such as shutter release, aperture, shutter speed, live view, info, exposure compensation, depth of field preview, Fn, flash exposure compensation, focus mode, AF/M, and zoom are all located at the users fingertips. Dual thumb levers pull important functionality from the back of the

camera out to the housing handles, allowing quick access to Video Record, AF-On (for thumb activated focus), ISO, and Image Playback. The patent pending Multi Controller Pad replicates this control from the D750 Camera, allowing easy focus point selection, even on the diagonals.

Controls clustered at the right grip place key camera functions right at the users fingertips.

The rubberized handle provides an ergonomic, non-slip grip.

Nauticam's patented Port Locking Lever is simple to operate, enabling easy port changes without twisting or excessive force. A vacuum reset button inside the port mount also allows the vacuum system to be quickly reset from the port mount, when making quick lens changes.

Keldan Video 8M Modular U/W Video Light

Announcing the Video 8M - the 2015 update to the modular underwater video lighting system widely recognized as the finest light of its kind. The Video 8M provides high output, high quality light in a modular format that allows the discerning underwater videographer to choose the right type of light needed for a particular look or set of conditions.

The Video 8M is sold in two different basic models, Video 8M FLUX and Video 8M CRI, and both include the 90°/110° dome reflector. Additional LED Modules are sold separately. The Video 8M FLUX is the high output workhorse of the family. With 9000 measured lumens at operating temperature, this light is able to add detail back to shadow areas in the brightest sunlight. The Video 8M CRI model produces 8000 lumens of broad spectrum high Color Rendition Index (CRI) light to faithfully restore colors that are missing at depth.

To the keen eye of the underwater videographer, the shape

and quality of the beam is paramount. The dome of the Video 8X allows for a 110° usable beam angle with gradual falloff. There are no hard edges to contend with even with ultra wide lenses.

The beam angle in water of the standard dome reflector when measured using the FWHM standard of 50% intensity is 90 degrees, but that doesn't accurately represent the beam pattern of this light. The usable beam angle is much wider thanks to a very even and gradual edge falloff.

Ikelite TTL Housing for the Canon EOS 7D Mark II DSLR

Ikelite proudly announces the latest addition to its DSLR Housing line, which is designed to offer one of the best performance to dollar purchases in the world. The Ikelite DSLR housing is a seamless blend of functionality, lighting integration, durability and waterproof integrity.

Special polycarbonate blends allow us to create an extremely strong yet clear and lightweight enclosure. There's no substitute for inspecting the actual o-ring seal once your housing is closed. Ikelite signature clear construction lets you see that the housing is watertight and dry before you enter the water, and provides full view of the camera while you're diving. Polycarbonate is fundamentally corrosion-resistant for easy maintenance year after year.

Like every Ikelite product, this housing is designed, built, and tested in the USA. Ikelite housings are built by hand and individually tested for fit, function and waterproof integrity. The average assembly technician is a certified scuba diver and has over 16 years of experience building Ikelite products. We back our products with over 50 years of experience and the most accessible and responsive customer service staff in the dive industry.

This housing requires the addition of a compatible lens port for waterproof operation. Lens port not included.

Nauticam NA-7DMKII Canon housing

It is clearly true that the NA-7DMKII is an improvement over the original NA-7D housing, but Nauticam has come so astonishingly far in the last 5 years that this really is not a useful comparison.

The NA-7D was an important housing for Nauticam but Nauticam SLR housings have advanced considerably. Take for example the housing latches. The NA-7D was the last Nauticam housing to use the "old school" stainless steel buckle style latches. The NA-7DMKII takes advantage of the simple yet secure locking latches that have since become famous. These latches are more secure, effortless to close, and eliminate the knuckle busting snap of the old buckles. The NA-7DMKII represents the ideal example of current Nauticam housing design.

Nauticam's patented Port Locking Lever is as simple to operate as ever, enabling easy port changes without twisting or excessive force. A vacuum reset button inside the port mount also allows the vacuum system

to be quickly reset from the port mount making quick lens changes a snap. These touches further reduce the stress of proper gear preparation and allow more time for diving.

Ikelite TTL housing for the Olympus PEN E-PL7

It's everything you love about an Ikelite DSLR Housing, shrunk down into a perfectly-sized package for travel.

An interchangeable lens camera demands a housing with interchangeable lens ports. It couldn't be more simple to change ports than this system—just press the port on and tighten three thumb screws. Feel positive reinforcement that the port is secure without any complex moving parts that can jam or break in a remote location. Plus, Ikelite's signature zoom sleeves are the lightest, most affordable, and easiest to assemble out there!

www.ikelite.com

Sealux Nikon 810 housing

The CD810 housing features very small dimensions. Large O-rings, doubly sealed shafts and even quadruply sealed keys provide the highest degree of safety.

The camera does not need to be moved in order to swap memory cards. All flash units can be connected without synch leads via the fibre optics jack.

OpenROV

OpenROV is a open-source underwater robot. It's also a community of people who are working together to create more accessible, affordable, and awesome tools for underwater exploration.

The backbone of the project is the global community of DIY ocean explorers who are working, tinkering and improving the OpenROV design. The community ranges from professional ocean engineers to hobbyists, software developers to students. It's a welcoming community and everyone's feedback and input is valued.

The project started in a garage in Cupertino, with a few guys who wanted to explore an underwater cave. The project has evolved into a network of connected devices, exploring the oceans and lakes of the world.

You're welcome to join us! Either by building your own ROV or contributing on the forums. No prior experience necessary.

Questions or suggestions? Feel free to email us

SeaLife AquaPod Mini

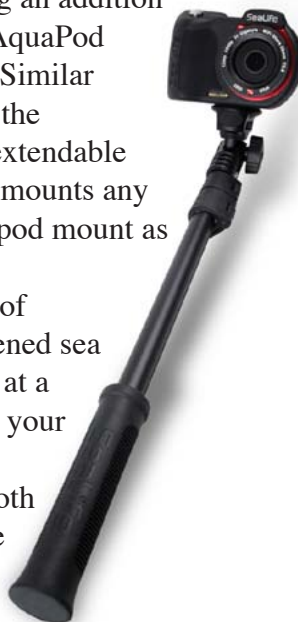

SeaLife is introducing an addition to the incredibly popular AquaPod – the new AquaPod Mini. Similar in features to the original, the new AquaPod Mini is an extendable underwater monopod that mounts any camera with a standard tripod mount as well as GoPro cameras.

Get up close footage of dangerous or easily frightened sea creatures while remaining at a safe distance by mounting your camera to the AquaPod or AquaPod Mini. Capture both videos and stills (using the interval shooting mode on your camera) from amazing perspectives. Both AquaPods are non-corrosive and resistant to salt water, making them unique among other monopods and ideal for underwater photography.

In addition to getting up close with sea creatures, AquaPods allow divers to easily capture self-portraits - angle the camera using the adjustable knob and take the perfect underwater selfie.

Both AquaPods are non-corrosive and resistant to salt water, making them unique among other monopods and ideal for underwater photography. The anodized aluminum body, stainless steel hardware and rubberized grip give both monopods a rugged and ergonomic design.

Ikelite TTL in select Aquatica housings

Ikelite and Aquatica will be partnering to make Ikelite's signature internal TTL circuitry available in Aquatica's distinguished line of housings.

Consistent exposure is the hallmark of Ikelite TTL technology. Integration directly into the housing gives the photographer total creative lighting control, with the opportunity to access both over/under exposure compensation and manual exposure settings through a single easy-to-reach control.

The visionary design of the Ikelite TTL circuitry takes its power source directly from the strobes, eliminating the unreliability of small batteries commonly used in TTL converters.

The Aquatica A7D Mk II housing for the Canon EOS 7D Mark II DSLR, to be introduced in early 2015, will be the cornerstone of this new and exciting collaboration.

This exciting partnership

provides an unprecedented access for the consumer to better photos through the most sophisticated underwater TTL exposure available!

Nauticam A5000 Sony A5000

"Small & Versatile"

The Sony A5000 is blurring the lines between compact camera and DSLR with its 20mp APS-C sensor and selection of lenses allowing your pick of the right lens for the job. The 16-50mm power zoom kit lens is easily and comfortably controlled in the Nauticam A5000 housing, offering a user experience familiar to compact users, but elevating image quality to that of a DSLR system twice its size. So feel free to shoot it like a compact, but when you are ready, it can do so much more.

www.reefphoto.com

Sea & Sea YS-03 Strobe and lighting system

The new YS-03 Strobe is a simple to use, DS-TTL only strobe that has been designed primarily for new underwater photographers using compact camera sets but can be used by anyone. The only control is a rotary power switch on the rear and by simply turning it on (and positioning the strobe), the user can take beautiful underwater images. The strobe is compatible with any camera with pre-flash that also has a TTL Flash Exposure function, regardless of make.

The Lighting System includes the YS-03 Strobe Head, a Fibre-Optic Cable II M/2 plus a Flexi-Arm and Tray; all you need to add lighting to a compact underwater housing.

Bite Back Calendar

Thirteen of the world's finest underwater photographers have been united in support of Bite-Back and its goal to make Britain the first country in the world to ban shark fin soup, each donating a stunning image that features in a limited edition 2015 fundraising calendar.

Among the images is a shot of a blue shark that won Alex Mustard the coast and marine category award in the 2014 British Wildlife Photographer of the Year. Other images by international photographers Adriana Basques, Amanda Cotton, Carlos Villoch, Chris Fallows, Christian Vizl, Doug Perrine, Ellen Cuylaerts, Imran Ahmad and Lia Barrett include sharks, whales, crocodile, stingrays and manta rays.

The 2015 calendar is the eight edition of the highly popular production and it presents a beautiful reminder of the marine life at risk from overfishing, pollution and rises in ocean temperatures.

Campaign director at Bite-Back, Graham Buckingham, said: "It's very exciting to have the support and friendship of so many talented photographers. Their stunning images are a window on the beautiful yet

fragile underwater world."

Sales of the calendar are a financial lifeline for the small charity and all profits will help fund its 'Hacked Off!' campaign to eliminate shark fin soup in British restaurants.

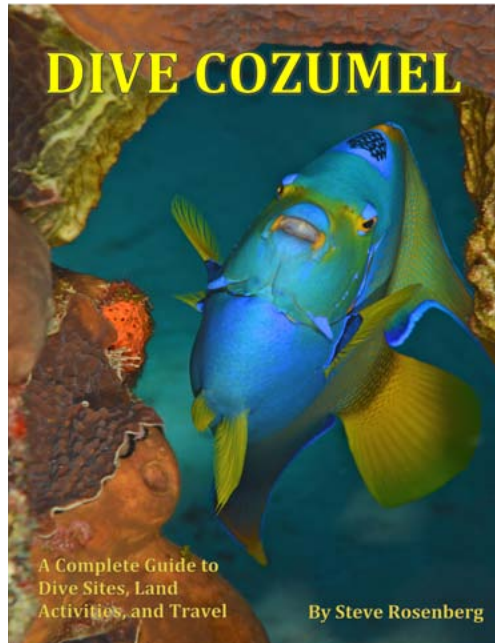

The A4 calendar makes an ideal gift for a shark fan, scuba diver or wildlife enthusiast. It costs just £8.99 and can be shipped anywhere in the world.

Jens Tröger Calendar

It's been two years since my 2013 calendar "Nudibranchs of the Pacific Northwest," and I've been busy gathering new photos ever since. And so, today I'm happy to share my new 2015 calendar which showcases all sorts of critters we can find in the coastal waters of the American Westcoast, from Southern California to Alaska.
