

New Products

Nauticam NA-H4D Hasselblad H4D/H3D systems

Nauticam sets new standards for underwater image quality by introducing our NA-H4D housing for Hasselblad H4D/H3D systems.

Sensors used in H System backs are approximately twice the size possible with 35 mm digital SLRs, featuring more pixels than 35 mm digital systems and providing better resolution and clarity. The pixels in H System backs are also larger, which means less noise in your images and better dynamic range with clearly improved detail. Hasselblad digital backs on H cameras also allow the exploitation of powerful features such as IAA (Instant Approval Architecture), DAC (Digital color aberration and distortion correction), HB RGB and 3F RAW for unique natural color solution, lifting the combination above and beyond the norm and well into the leading position of medium format digital photography.

The H System's central lens shutter allows flash sync at all shutter speeds, enabling use of flash in all lighting conditions. H cameras' contemporary design and intuitive operation provide simple and convenient handling and the

programmable interface allows you to customize the camera according to your particular desires or working styles.

The NA-H4D housing allows convenient access to all functions of the camera, maximizing the exploitation of this superior system underwater and making sure that all important moments are captured without hassle. The housing is also extremely well balanced; its thoughtfully designed profile means that when the camera is placed within, the system is almost buoyant underwater.

Both front and rear control wheels are within easy reach by the right thumb and middle finger; with

the extra large knobs, settings can be adjusted effortlessly. Shutter release is activated via a lever, by the right index finger; the 2-stage lever mechanism is designed to increase the tactility by improving the feedback from the camera's shutter button, hence eliminating accidental release while focusing. Moreover, the lever located close to the right handle can be customized to reach either the AEL or the true focus functions of the camera; while a circular multi-directional pad, within comfortable reach by the left thumb allows smooth and swift photo browsing and navigation through the menu.

This is iBubble

iBubble is the first autonomous diving drone that follows you and captures beautiful footage, hands-free.

We're underwater world lovers. What we enjoy most is exploring the underwater world, taking in the beauty of the oceans. If you're like us, you know how cool it is to share your diving experiences with people on land. But you also know how complicated filming can be, how it limits your freedom underwater – and freedom is why we dive in the first place.

With iBubble, we're designing the first intelligent, user-friendly and completely autonomous diving drone. It gives you unprecedented possibilities to create underwater

movies with your GoPro®. From scuba divers to free divers, but also recreational snorkelers and spear fishers, everyone can enjoy iBubble!

Thanks to our patented underwater localization technology, iBubble follows you and films entire diving sessions – without you having to do anything. It's your own pilot fish, but with a camera and smarter.

A version will also be available with a 100 metre tether and surface control with a video link.

360Abyss™ v4

Over the course of the past 3 years, 360RIZE underwater spherical video technology has helped hundreds of filmmakers, oceanographers and educators document and share our planet's aquatic environments.

The 360Abyss™ v4 is a professional underwater 360 video camera system. With an output resolution of 8K (8,000 x 4,000 pixels) and a 1,000 meter crush depth rating.

The 360Abyss™ v4 positions six GoPro™ HERO3, HERO3+, or HERO4 cameras in a spherical orientation to capture fully spherical 360 x 180 degree 360 video content. The individual videos from each camera can then be stitched together using post production software to create 360° videos.

Two new upgraded Keldan lights

KELDAN stands for compact lights that are not only extremely bright, but offer the best beam and colors for specialty applications such as underwater videos

KELDAN is continuously working on the improvement of their product line and have made an upgrade of the VIDEO 4X FLUX and Video 8X FLUX.

The 2017 version of these two new lights includes a very wide power range with 9 power levels. We have also been able to increase the output from 7000 lumen to 8000 lumen (for the Video 4X) and from 12000 lumen to 13000 lumen for the Video 8X.

Both lights have a high color rendering index of CRI82 to ensure that colors are correct and natural.

The lights are now shipped with a ball mount instead of the YS-Adapter.

The new lights have a new model name: VIDEO 4X 8000lm CRI82 (Item No. 1094) and VIDEO 8X 13000lm CRI82 (Item No. 1071).

Keldan's lights have a new driver that offers a seamless intensity

control over 9 steps from 2.5% output. Each step is 50% greater than the previous, giving a logarithmic smooth adjustment. There is also an off position on the switch which is separate from the travel position, allowing the light to be adjusted with one hand.

BS Kinetics universal video housing

BS Kinetics has developed the “Gobi” as an universal underwater housing. With camcorders continuously shrinking in size, the rapid model changes and the stringent air traffic rules are cause for new approaches for underwater casings. These approaches relating to size, weight, universal use, special adaptations to the cameras and customer requests are implemented with this underwater casing. Current cameras like the Canon HF G30 or the Sony PJ810 are suitable. For the Sony models from 2013 an additional cable VMC-AVM1 is needed because these cameras have a new multi connector.

The carbon casing has a net weight of 2.6 kg and a size of 14x15x31 cm. It will hold cameras up to 17 cm long. The composite material of carbon fibre and epoxy resin, well-known from formula one racing and light aircrafts, is as hard as steel while offering the benefits of a synthetic

material. It is rot-proof, long-lasting and not affected by salt water or UV rays.

The camcorder is controlled via a cable or infrared remote control inside the casing. It is offered for camcorders by Sony, Panasonic, Canon and JVC. This flexibility allows all camcorders to be operated. After switching cameras updating/exchanging the control will set it up for the new camcorder, if necessary. Recordings can be viewed with a 3.6” TFT colour monitor. It is powered via rechargeable battery and features a run time of 8 hours. LEDs indicate the battery charge level, reminding the user to recharge in due time. A 3.5” high resolution TFT is optionally available. This monitor captivates with a greater viewing angle and non-reflective images in the sun.

4 DIFFERENT LIGHTS IN ONE SMALL
PACKAGE (WHITE, RED, UV AND AUTO OFF)

WEEFINE SMART FOCUS 2300

It's a Video light, red light, UV light and automatic focus light - all in one!
Maximum power: 2300 lumens.

UWCamerastore is WeeFine distributor for Europe.

Sea & Sea MDX-5D Mark IV for Canon EOS 5D Mark IV

The MDX-5D Mark III and the MDX-5D Mark III ver. 2 housings can be converted to accommodate both the EOS 5D Mark IV and the EOS 5D Mark III (fees apply).

Important controls can be operated whilst holding the grips. Frequently-used buttons such as ISO, AF Point Selection and Multi-function Selection buttons are operated by external levers, allowing quick and accurate operation.

The Port Lock prevents the port from turning or loosening and the Port Lock lever is specifically located to avoid being unlocked accidentally.

The housing is equipped with a lens-lock release button which makes it possible to change lenses easily, without opening the housing.

The camera's diopter adjustment dial can be operated from outside the housing. This feature is useful when two or more people with different eyesight use the housing.

Pulling out the Focus/Zoom Dial gives sufficient room inside the

housing to easily accommodate larger diameter lenses.

All controls have luminescence stickers which glow in dark environment.

Equipped with the Optical Viewfinder 0.5x as standard. Other optional viewfinders such as the VF180 1.2x, VF45 1.2x and Optical Viewfinder 0.8x can be used.

Sync Cord 2-pin Connector enables use of conventional hardwired Sync cable (Manual mode only).

Accessory port enables use of Leak Sentinel (vacuum sensor).

Built-in leak sensor immediately alerts you to water ingress.

Equipped with two sacrificial zinc diodes (one on the front case and the other on the rear) to prevent electrolysis damage.

Tripod screw mount is located on the centre underside of the housing.

TEL: 01404812277

A black, rugged underwater camera housing with two large side handles. The front features a large lens with 'CANON ZOOM LENS EF 16-35mm 1:2.8 L USM' and '48.2mm' markings. The brand name 'AQUATICA' and model 'A5DMkIV' are visible on the top and front.

AQUATICA HOUSING FOR THE CANON EOS 5D MK IV

Issue 94/21

Aquatica Canon 5DMk IV housing

Aquatica is proud to introduce to you the new Aquatica A5DMkIV housing for Canon's latest evolution to the 5D family, the 5D Mk IV. Our housing is scheduled for shipping around the end of November 2016.

Our design engineers were happy to find out that the 5DMk IV was very similar to the cameras that came before it, the 5DMkIII and the 5DS/R, therefore they only had to make small changes to this new housing and also made a few controls more ergonomic.

With very low R&D costs, we are pleased to announce a retail price of \$2,795.00 USD. This will be by far the best aluminum housing option on the market.

www.backscatter.com

Ikelite 200FL TTL Housing for Nikon D3300, D3400 DSLR Cameras

We extend the ergonomics of your camera underwater, providing larger controls and push buttons which are easy to access even with thick gloves. Whenever possible, controls are located in the same configuration as on the camera to replicate the muscle memory and familiarity you've developed with your camera on the surface. Control symbols laser engraved into the back of the housing will never peel off or fade even with years of use. The camera's large, super-bright LCD screen is viewable edge-to-edge through the back of the housing.

The front-loading camera mounting system makes installation and removal a breeze. The camera mounting plate allows ready access to the battery and memory card.

NA-5DIV Housing for Canon 5DIV Camera

Introducing Bonex Scooters & DPVs

Manufactured in Germany, Bonex offer a range of underwater scooters that are the result of years of intensive development.

Their products stand for compactness, high performance and reliability. Bonex underwater scooters are the most compact professional scooters world-wide with an unbeatable performance/weight ratio. They are a perfect combination of low weight and long runtimes!

Powered by Bonex, the compact, travel-friendly Aquaprop is extremely lightweight at only 6kg. This makes it ideal for everybody and can be used in a wide range of locations, such as swimming pools, lakes and the sea. Fun for everyone who loves the water!

The Universal and Performance ranges offer transport solutions for technical divers wanting to explore deeper and further.

Universal models (Ecos/Ecos+/Ecos S) use modern and reliable servo motor technology, powered by Lithium-ion batteries. Because they are lightweight, at only 15kg, they can easily be transported for ocean, wreck and cave diving.

Performance models (Reference RS/Discovery RS/Infinity RS) are more capable and designed for use in more challenging conditions, like strong currents, and for divers loaded with extensive gear or covering greater distances.

Available to order from Sea & Sea Ltd stockists.

Not a Digital SLR,
not a film SLR,
but with a picture quality
that exceed the two!

Orcatorch Dive Lights

This is a range of well priced, precision machined aluminium dive lights that are compact and light to handle but bright and powerful to use.

Orcatorch Technology Ltd is an integrated company specializing in the R&D, manufacture, sales and marketing of high performance LED flashlights for scuba diving, outdoor adventure, the police and military. This is all done in-house with their own R&D centre, CNC machines, product assembly lines and testing labs.

The range of dive lights includes compact backup lights, primary dive lights, umbilical canister lights and video lights. Accessories such as the hand/wrist mounts along with the

D560 mask mount makes the Orca range extremely versatile.

Utilising Cree LEDs and high-efficiency constant current circuitry to maximise the conversion of power to light, Orcatorch lights keep a high brightness until the battery is totally spent.

To ensure an even and efficient beam, aluminium alloy reflectors are used along with toughened, scratch-resistant glass (coated on both sides).

Robust construction in hard-anodised finish aluminium ensures the units are lightweight with good heat dissipation and every ORCA dive light has to pass a 150mt water pressure test.

Backscatter Flip 5

Backscatter is pleased to announce the latest generation of their Flip Filter line with the arrival of Flip 5.

The Flip 5 is designed to be compatible with the new Hero 5 Super Suit Housing, and also the Hero 3, 3+, and Hero 4 housings. This can be achieved with the included plastic spacer to fit seamlessly with the front port on each housing.

Backscatter makes three different filters for perfect color at any depth, and the Flip system can support one or two filters on the same dive. These filters are optical-quality acrylic and are virtually unbreakable. They offer specifically calibrated filters for different depths, like the Shallow Filter for 5-20ft, Dive Filter for 20-50ft, and Deep Filter for anything below 50ft.

In addition to the standard filters, there is a broad range of filters and lenses for specialty work and environments, like the Greenwater filter, +15 MacroMate Lens, +10 Close-focus Lens, Nightsea/Fluorescence filters, and for topside there are polarizers and graduated neutral density filters.

A new feature of the Flip 5 is an

included Lens Removal Tool. This tool was developed to assist with removing the lens on your Hero 5 camera. The lens must be removed before installing the camera in the housing, and testing has found it can be a little tricky sometimes. With the inclusion of the new Lens Removal Tool you can now easily twist for simple lens removal.

The Flip 5 is available for pre-order now, and will begin shipping in January 2017.

Acquapazza housing for the Sigma sd Quattro and sd Quattro H

Japanese housing manufacturer Acquapazza are developing a housing for the Sigma sd Quattro and sd Quattro H.

The Sigma sd Quattro H uses a 26.6x17.9mm Foveon sensor that the company says offers resolution on a par with a 51MP sensor of traditional design. The sensor actually uses 25.5 million pixels, but due to the unique layout of the sensor Sigma claims it can record twice the detail of standard models.

Acquapazza have enlarged a photograph taken with the original dp Quattro with 29 megapixel to A0 size without any significant loss of quality.

Acquapazza feel that the performance of this camera is more like medium format but in a much smaller physical size.

They are excited at the prospect of being able to capture such quality underwater.

www.acquapazza.jp/en

Weefine ring light

Perfect macro images or videos with the new Weefine ring light. This was one of the biggest innovations at the Dema show in 2016!

The ring light gives you 1000 lumens (continuesly) with 4 different power levels (100%, 75%, 50% and 25%) and can be easily mounted on any 67mm port or adapter. The burn time is around 1 hour at the highest power level. The power comes from one 18650 battery or three AAA batteries. The battery is already supplied in the package and it comes with a small and easy to use

charger. The Weefine ring light will be available mid January 2017.

Price: €249,-

IKELITE HOUSING FOR THE PANASONIC LUMIX GX85

SAGA Trio lens

Saga Dive announces the release of its new macro lens: Trio.

This revolutionary lens is the most advanced wet magnification systems available at the moment. The patented two lever system makes it possible for the photographer to easily change magnification, even while they are looking through the viewfinder, enabling switching between differing magnification ratios in the minimum time possible but with the maximum optical quality.

The new lens, Trio, is designed to be used with macro lenses as the Canon 100mm or the Nikon 105mm but it can also be used with some other lenses, such as the canon or Nikon 60mm macro lenses. It has been tested with the Sigma 150mm and Canon 180mm too.

Manufactured from hard anodized machined aluminum, the Trio has two groups of lenses inside: One with a +5 diopter and the other with a +10. These two groups can be moved independently, allowing 4 possible levels of magnification. With the the two levers in their upper position, there is no magnification, which gives infinite focus without any vignetting.

The lens is attached to the port via a 67mm thread. If your port doesn't have a 67mm, Saga Dive have an adaptor for any type of macro port.

Once attached, the lens can be rotated in order to place the lens in any preferred position and to allow problem free strobe positioning.

The lens will be shipping from mid January.

Underwater Photography Masterclass Ebook

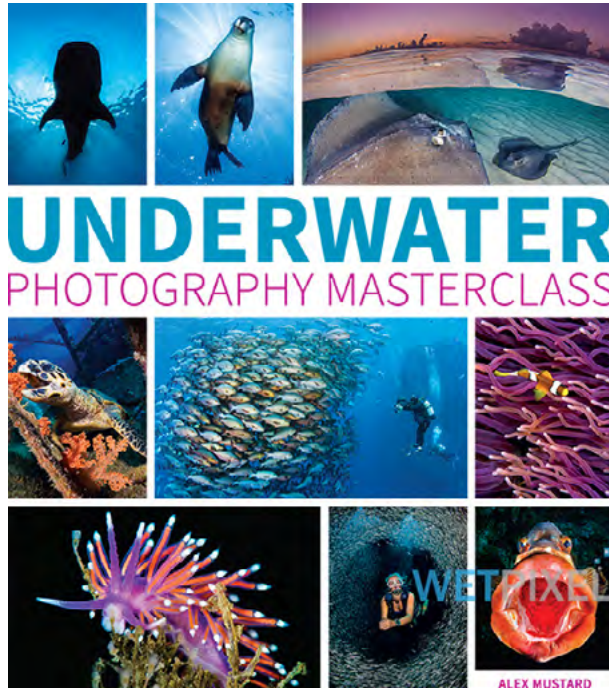

by Alex Mustard

This book is available for download with iBooks on your Mac or iOS device, and with iTunes on your computer. Books can be read with iBooks on your Mac or iOS device.

It is an interactive guide with over 40 video lessons and 100 bonus images.

Discover the wonders of underwater photography with one of the masters of the art in an animated Ebook that features nearly 50 instructional videos as well as a collection of stunning bonus images. With marine biologist and award-winning photographer Dr Alex Mustard as your guide, you will learn the diving techniques necessary to explore the extraordinary creatures and landscapes that lie beneath the surface, as well as the photographic techniques required to portray them in all their glory.

From information about diving equipment and cameras, to crucial advice on understanding and controlling light, the fully searchable content provides everything you need to elevate your underwater photography to professional levels.

Topics covered include wide-angle light, macro lighting, ambient light and macro techniques – all illustrated with stunning images of the weird and wonderful flora and fauna Alex has encountered beneath the waves.

Freshwater Fishes of Britain

by Jack Perks

Freshwater Fishes of Britain is illustrated with at least one photograph of each species, from the predatory Pike to the graceful Grayling and is accompanied by a brief description of the fish, including details of their distinguishing features, habitat, breeding and much more.

Jack Perks uses specialist underwater photography methods involving long and super macro lenses to showcase images of freshwater fish in a new light. Jack's innovative photographic techniques provide a fascinating insight into the world of Freshwater Fishes of Britain.

Jack includes photographs for all the fish featured in his book, from the Thick-lipped Grey Mullet, 'the largest mullet species found in British waters and also the most common', and the Three-spined Stickleback, 'a voracious predator, engulfing anything that will fit inside its mouth', to the Atlantic Salmon, known as the 'king of fish', which undertakes huge migrations from the Arctic Ocean back to the river they were born in order to spawn, and the Brown Trout, recently voted the UK's National

Fish and probably Britain's most widespread freshwater fish, found from Cornwall to the Shetland Islands and everywhere in between.

With facts throughout, such as why the Tench is sometimes called the 'doctor fish' or why Bitterling lay their eggs inside a living Swan Mussel, Freshwater Fishes of Britain by Jack Perks covers almost every British species and is sure to appeal to both naturalists and anglers across the country.

Published by Reed New Holland at £16.99 and available from all good bookshops or online via www.amazon.co.uk or call 01206-255777.
